

AI-Powered Medical Recommendation Chatbot

AI Healthcare Assistant System

Project Overview

An AI-powered healthcare chatbot that helps users get basic medical recommendations based on symptoms. The chatbot will provide AI-generated suggestions, medicine recommendations, health tips, and maintain chat history in real time.

Tech Stack

- React.js + TypeScript
- Node.js + Express.js
- MongoDB
- Tailwind CSS
- Gemini / OpenAI API
- Socket.IO
- Git & GitHub

Core Features

- AI medical chatbot
- Symptom-based recommendations
- Real-time chat system
- Chat history management
- User authentication
- Doctor recommendation system
- Medicine suggestion module
- Responsive dashboard UI

Chatbot Features

- Real-time messaging
- AI-generated responses
- Conversation history
- Typing indicators
- Quick symptom suggestions

5 Week Internship Plan

Week 1 — Project Setup & UI

- MERN project setup
- Git & GitHub workflow
- Authentication UI
- Chat UI design
- MongoDB setup

Week 2 — Backend & Authentication

- JWT authentication
- User APIs
- Chat APIs
- Chat history management
- Form validations

Week 3 — Real-Time Chat System

- Socket.IO integration
- Real-time messaging
- Typing indicators
- Message storage
- Responsive UI improvements

Week 4 — AI Integration

- Gemini / OpenAI API integration
- Medical recommendation prompts
- AI response handling
- Doctor recommendation logic
- Health tips module

Week 5 — Testing & Deployment

- Bug fixing
- API testing
- Deployment
- Documentation
- Final presentation
